KEYNOTE ADDRESS

There's a very common saying in English that "great work often starts with a great idea."

What makes an idea great?

What gives greatness to the idea is **what it makes you feel. Because if that idea felt nothing to you, you would never be able to muster the resources that you require to make that idea real.** So what's driving it is how it makes you feel. And it's about time that as an entire human race, we woke up to acknowledge, respect, and learn how to work with our feelings because there's no escaping that.

Feelings are in the back of everything that you do, execute and achieve. That all your so-called control is outside your skin. You have almost zero control inside the body and that's where the feelings are.

So if you need to be able to tap into your feelings, you need a root to tap into the body and not many people know how to do that. So you will suddenly realize that all your so-called control is outside your skin.

You have almost zero control inside the body and that's where the feelings are. So if you need to be able to tap into your feelings, you need a root to tap into the body. And not many people know how to do that.

So from the time I came in 2005 to Dubai 20 years, Ekaa has been benchmarking scientific protocols to assist people in learning how to explore, understand and master their feelings, repackage them to get into a state of happiness that you all want to get into.

And there's a way to do it. It's not random at all. So if this super mental state has to awaken in us, it's going to need two things.

It's going to need a fit and an agile body which many of you represent on this platform.

It's going to need an emotionally equanimous and a very clear-minded software of the mind. And when you join both these things together, you have a fantastic opportunity to rewrite the destiny of humanity.

KEYNOTE ADDRESS

I've been here 20 years. I've never seen something like this happen before. And so this is a big shout-out to Stephen and to the entire team in making this act happen.

I'm unfortunately a person who suffers from verbal diarrhea. So it's very easy for me to lose track of time. It's 9:23. I will need 1 minute before I close.

Stephen - "Take three"

Take three. Oh, this is life. You ask for one, you get three. Greatness, of course, is Stephen's ability to give me the two extra minutes. And my humility should be in not using them at all. **Because if you use the power that is given to you, you take away its power from what it's able to do.**

And so to conclude, perhaps I think we would all agree with the fact that if we can leave behind this planet after we pass away in a slightly better state than what it was when we were born into it, then I think we would have achieved quite a lot in our lives. And I'm sure all you agree. So here's wishing you an absolutely awesome day, and let's mentally resolve to change the framework of this net in terms of holistic healthcare and I'm sure as a team we can do this.

All the best.

Thank you.

Yuvraj M Kapadia

PANEL DISCUSSION

DECODING MIND ALGORITHMS

THE BUSINESS OF CONSCIOUS WELL-BEING

Moderator: Dr. Nia Roy

Speakers: Rajesh Singh, Praveen MR, Dr. Bassam Saab
Dr. Rupinder Sodhi, Jacky Vrendra

SLEEP, STRESS & THE SUBCONSCIOUS MIND

Jacky Vrendra, engineer-turned-hypnotherapist, explored the connection between sleeplessness and unresolved emotions. She emphasized that insomnia is not an illness but a symptom — a “fire alarm” pointing toward deeper emotional unrest like grief, guilt, or anxiety.

Through a real-life case study, she illustrated how hypnosis can help access and resolve these subconscious emotions, naturally restoring restful sleep. Jacky concluded that true healing begins when we address the root emotional causes rather than merely treating symptoms with surface-level fixes.

THE MYSTERY OF HEALING IN A DATA-DRIVEN WORLD

Dr. Sodhi, a seasoned medical doctor and holistic practitioner, contrasted conventional medicine’s obsession with data against the intangible nature of healing. He argued that while AI and modern metrics can measure physical symptoms, they cannot quantify emotions, energy, or the healing bond between a doctor and patient.

According to him, healing involves energy exchange that releases serotonin and oxytocin, enhancing resilience and immunity. He explained that hypnosis is a natural, safe, and scientifically validated state of focused awareness — far removed from the myths of mind control.

PANEL DISCUSSION

THE GUT REMEMBERS WHAT THE MIND FORGETS

Praveen explained the neuroscience behind the gut-brain axis and its link with emotional health. He shared that 90% of serotonin — the “happiness chemical” — is produced in the gut, and unresolved emotions like fear or grief directly disrupt digestion and hormonal balance. Healing emotional trauma through hypnosis often improves IBS, gastritis, and sleep issues, proving that gut health mirrors emotional stability.

Praveen described this as the intersection between psychology and physiology — where mind, body, and emotion communicate through the vagus nerve.

FROM ALTERNATIVE TO MAINSTREAM - HYPNOSIS IN POLICY FRAMEWORKS

Dr. Bassam Saab discussed how holistic modalities, such as hypnosis, are gaining official recognition in the UAE. He highlighted two national initiatives — Well-being Strategy 2031 and Quality of Life Strategy 2033 — both aimed at integrating mental and emotional wellness into mainstream health systems. He announced the formation of the Emirates Council for Integrative Medicine, a government body formalizing alternative and complementary therapies, ensuring safety, regulation, and professional legitimacy. He emphasized that hypnosis complements rather than replaces medical treatment and should be viewed as part of a broader health ecosystem.

FROM BURNOUT TO BALANCE

Rajesh, drew from two decades in corporate training to explain how unmanaged stress leads to emotional fatigue and poor performance. He described how our five senses constantly receive “message units” — data inputs processed by both mind and body — and when overwhelmed, they create mental fog and decision fatigue.

Through hypnosis, individuals can reorganize these inputs, enhance focus, and align emotional stability with productivity. He urged organizations to shift from fear-driven performance models to emotionally intelligent work cultures.

PANEL DISCUSSION

COLLECTIVE REFLECTIONS AND AUDIENCE QUESTION & ANSWERS

The session closed with reflections on the coexistence of AI and human therapy. Panelists agreed that while AI can aid surface-level wellness through guided meditations or data analysis, it cannot replicate empathy, intuition, or human connection essential for healing. They also addressed audience questions about regulation, training, and building unity among holistic practitioners. Holistic modalities must unite for legitimacy and global recognition.

The panel concluded that healing is a journey toward resolution — not mere relief — and that empathy remains irreplaceable in an increasingly technological world. True healing resolves causes, not just symptoms or temporary relief. The future lies in merging human intelligence with compassionate technology.

EKAA BOOTH

At the Holistic Health Middle East Conference, the Ekaa booth came alive with experiential learning, where science and consciousness merged through powerful demonstrations by EKAA trainers.

Mitali Akarte presented Psychoneuroimmunology in Everyday Life, guiding participants through quick Nervous System Reset exercises to balance mind, body, and emotions in daily life.

Gurbani Kaur introduced Graphology, helping participants decode their personality traits, emotions, and subconscious patterns through handwriting analysis.

Neerja Handa explored the Minor & Micro Chakras and used the Happiness Index Machine to demonstrate how thoughts and beliefs influence energy and emotional well-being.

Zankhana Mistry facilitated Aura and Chakra Cleansing, Balancing & Energizing, where participants saw their energy fields, learned their emotional and physical impacts, and received guidance on healing through hypnotherapy & holistic healing.

Dr. Swapnalie Dabholkar presented The Gut-Brain Axis, offering one-on-one assessments to reveal how food affects mental health and how hypnotherapy bridges this vital connection.

Nisha Menon led Emotions & Expressions, a creative process where art and color became tools to access awareness, release emotions, and promote healing.

Mariya Vazharska conducted the Suggestibility Questionnaire, explaining different suggestibility types and how they influence communication, perception, and behavior patterns.
